1 Introduction

The Commonwealth Bank of Australia (CBA) is an Authorised Deposit-taking Institution (ADI) regulated by the Australian Prudential Regulation Authority (APRA) under the authority of the *Banking Act 1959* (Cth).

This document is prepared for CBA and its subsidiaries (the Group) in accordance with the Board approved policy and APRA's Prudential Standard APS 330 *Public Disclosures* (APS 330). Australian ADIs are required to comply with the "Disclosure requirements" Standard issued by the Basel Committee on Banking Supervision (BCBS), subject to certain modifications by APRA.

The document presents information on the Group's capital adequacy, Risk Weighted Assets (RWA) calculations, Group's leverage and liquidity ratios in accordance with prescribed regulatory methodologies.

For capital adequacy the Group reports information on credit risk (including securitisation), traded market risk, interest rate risk in the banking book (IRRBB) and operational risk.

The Group is required to report its assessment of capital adequacy on a Level 2 basis. Level 2 is defined as the Consolidated Banking Group excluding an insurance entity and certain entities through which securitisation of the Group's assets is conducted.

The Group is predominantly accredited to use the Advanced Internal-Ratings Based (AIRB) approach for credit risk and the Standardised Measurement Approach (SMA) for operational risk. The Group is also required to assess its traded market risk and IRRBB requirements under Pillar 1 of the Basel capital framework. The Group adopted the revised APS 117 *Capital Adequacy: Interest Rate Risk in the Banking Book* (APS 117) effective from 1 October 2025.

The Group's Pillar 3 documents including disclosures of capital instruments are available on the Group's corporate website: commbank.com.au/regulatorydisclosures.

The Group in Review

	31 Dec 25	30 Jun 25	31 Dec 24
	%	%	%
Summary Group Capital Adequacy Ratios (Level 2)			
Common Equity Tier 1	12.3	12.3	12.2
Additional Tier 1	1.5	1.6	1.9
Tier 1	13.8	13.9	14.1
Tier 2	6.8	7.0	6.6
Total Capital	20.6	20.9	20.7

Group Capital Ratios

As at 31 December 2025, the Group's Basel III Common Equity Tier 1 (CET1), Tier 1 and Total Capital ratios were 12.3%, 13.8% and 20.6%, respectively.

Leverage Ratio

The Group's leverage ratio which is defined as Tier 1 Capital as a percentage of total exposures, was 4.7% as at 31 December 2025.

Liquidity Coverage Ratio

The Liquidity Coverage Ratio (LCR) requires Australian ADIs to hold sufficient liquid assets to meet 30 day Net Cash Outflows (NCO) projected under an APRA prescribed severe liquidity stress scenario. The Group maintained an average LCR of 132% in the 31 December 2025 quarter.

Net Stable Funding Ratio

The Net Stable Funding Ratio (NSFR) is the ratio of the amount of Available Stable Funding (ASF) to the amount of Required Stable Funding (RSF) over a one year horizon. Factors prescribed by APRA are used to determine the stable funding requirement of assets and the stability of alternative sources of funding. The Group's NSFR was 117% at 31 December 2025.

Introduction (continued)

The Group in Review (continued)

Policy Framework and Risk Management Culture

The Group regularly benchmarks and aligns its policy framework against existing prudential and regulatory standards. Potential developments in Australian and international standards, along with global best practice are also considered in the framework.

To support its policy framework, the Group continues to monitor and take actions to enhance and strengthen its risk culture. The Group has a formal Risk Management Approach (RMA) that creates clear obligations and transparency over risk management and strategy decisions. A risk accountability model (Three Lines of Accountability) requires business management to operate responsibly by taking well understood and managed risks that are appropriately and adequately priced.

The application of the RMA is reflected in the Group's overall asset quality and capital position. CBA is one of the few banking institutions with an AA-/Aa2 credit rating.

The Group's capital and forecasting process and capital plans are in place to support a sufficient capital buffer above minimal levels to be maintained at all times. The Group manages its capital by regularly and simultaneously considering regulatory capital requirements, rating agency views on the capital required to maintain the Group's credit rating, the market response to capital levels and stress testing. The Group's management of its capital adequacy is supported by capital management processes applied in each Business Unit (BU). The results are reinforced by integration into the Group's risk-adjusted performance and pricing processes.

2

Scope of Application

This document has been prepared in accordance with the Board approved policy and the requirements as set out in APS 330.

APRA adopts a tiered approach to the measurement of an ADI's capital adequacy:

- **Level 1:** The Parent Bank (CBA) and offshore branches (the Bank) and APRA approved Extended Licensed Entities (ELE);
- **Level 2:** the Consolidated Banking Group excluding an insurance entity and certain entities through which securitisation of the Group's assets is conducted; and
- **Level 3:** the conglomerate group including the Group's insurance entity and qualifying securitisation entities (the Group).

Most of the disclosures in this document are undertaken on a Level 2 basis. Additional disclosure of capital ratios relating to material ADIs within the Group together with the Level 1 capital ratios are included in Section 3 of this document.

ASB Bank Limited (ASB) operates under Advanced accreditation status and is subject to regulation by the Reserve Bank of New Zealand (RBNZ).

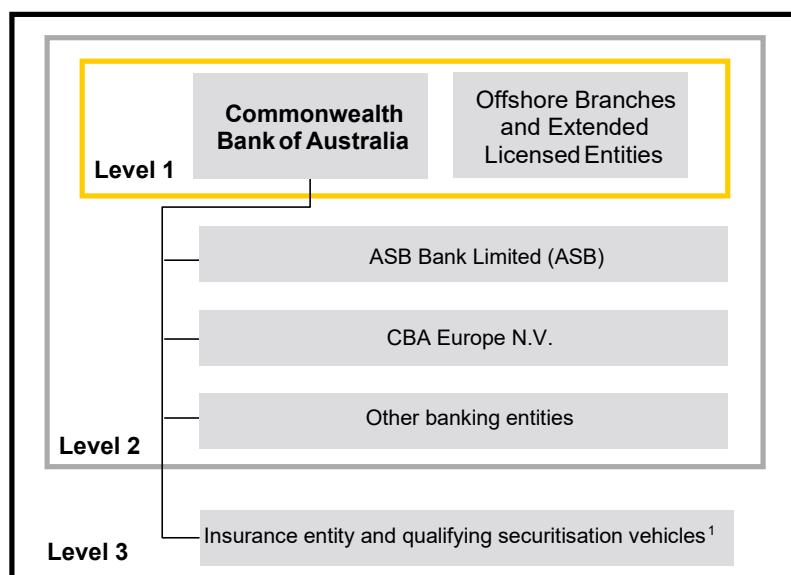

CBA Europe N.V. applies the standardised capital methodology in calculating its local regulatory capital requirements. Effective from March 2022, APRA approved the use of the Internal Ratings Based approach (IRB) by CBA Europe N.V. for the purpose of determining the Group's capital requirement on a Level 2 basis.

Restrictions on transfer of funds or regulatory capital within the Group

The transfer of regulatory capital and funding within the Group is subject to restrictions imposed by local regulatory requirements. In particular, APS 222 *Associations with Related Entities* establishes prudential limits on the level of exposure that the Bank may have to a related entity.

The Bank and all of the subsidiaries of the Group are adequately capitalised. There are no capital deficiencies in non-consolidated (regulatory) subsidiaries in the Group.

APS 330 reporting structure

¹ Securitisation that meets APRA's operational requirements for regulatory capital relief under APS 120 *Securitisation* (APS 120).

3

Capital

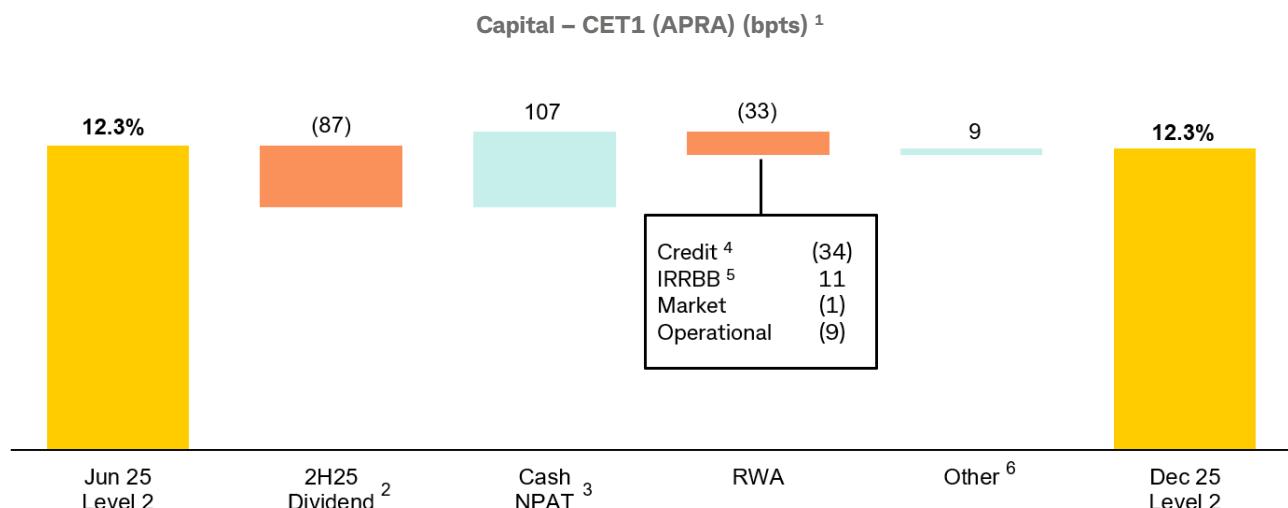

Capital Adequacy

The Group actively manages its capital to balance the perspectives of various stakeholders (regulators, rating agencies and shareholders). This is achieved by optimising the mix of capital, while maintaining adequate capital ratios throughout the financial year. The Group's capital is managed within a formal framework, the Internal Capital Adequacy Assessment Process (ICAAP), which is an integration of risk, financial and capital management processes.

APRA advises the Group of its Prudential Capital Requirement (PCR), which represents the regulatory minimum CET1, Tier 1 and Total Capital ratios that the Group is required to maintain at all times. In order to ensure there is no breach of these minimum levels, APRA expects the Group to maintain a prudent buffer over these prescribed minimum levels. The PCR is subject to an ongoing review by APRA and is formally reassessed on an annual basis. The Group is required to inform APRA immediately of any breach or potential breach of its PCR, including details of remedial action taken or planned to be taken.

The Group has a range of instruments and methodologies available to effectively manage capital. These include issuances and buy-backs of ordinary shares, dividend and DRP policies, subordinated loan capital issuances qualifying as Tier 2 Capital, and the redemption of existing Additional Tier 1 Capital and Tier 2 Capital instruments according to their terms and conditions. All major capital related initiatives require approval by the Board.

The Group's capital position is monitored on a continuous basis and reported monthly to the Executive Leadership Team of the Group and at regular intervals throughout the year to the Board Risk and Compliance Committee. Capital forecasts are updated on a continuous basis and a detailed capital plan is presented to the Board annually.

¹ Due to rounding, numbers presented in this section may not sum precisely to the totals provided.

² The 2025 final dividend included the on-market purchase of \$643 million of shares (CET1 impact of -13 bpts) in respect of the Dividend Reinvestment Plan.

³ Excludes net equity accounted profits/losses and impairments from associates as they are capital neutral with offsetting changes in regulatory capital deductions.

⁴ Excludes the impact of foreign exchange movements which is included in 'Other'.

⁵ Includes the impact of the reduction to IRRBB RWA of ~\$10 billion (CET1 impact of +24 bpts) on adoption of the revised APS 117 framework effective 1 October 2025.

⁶ Includes the impact of intangibles, FX impact on Credit RWA, equity accounted profits/losses and impairments from associates, movements in reserves and other regulatory adjustments.

Capital Position

The Group's CET1 Capital ratio was 12.3% as at 31 December 2025, in line with 30 June 2025. The CET1 Capital ratio was well above APRA's regulatory requirement at all times throughout the half year ended 31 December 2025.

The key drivers of the change in CET1 for the 6 months ended 31 December 2025 were:

- Capital generated from earnings; and
- Other regulatory adjustments and movement in reserves; partly offset by
- The payment of the 2H25 dividend; and
- Higher Credit Risk, Traded Market Risk and Operational Risk RWA, partly offset by lower IRRBB RWA which includes the impact of adoption of the revised APS 117 framework, effective 1 October 2025.

Further details on the movements in RWA are provided on pages 13-14.

Capital (continued)

Capital Initiatives

The following significant capital initiatives were undertaken during the half year ended 31 December 2025:

Common Equity Tier 1 Capital

The Dividend Reinvestment Plan (DRP) in respect of the 2025 final dividend was satisfied in full by the on-market purchase of shares. The participation rate for the DRP was 14.8%.

As at 31 December 2025, the Group has completed \$300 million of the \$1 billion on-market share buy-back previously announced on 9 August 2023 (2,706,964 ordinary shares at an average price of \$110.72). No share buy-back activity was undertaken during the December 2025 half.

Tier 2 Capital

The Group issued EUR1,000 million Basel III compliant subordinated notes in August 2025.

The Group redeemed AUD1,400 million subordinated notes in September 2025 and the remaining USD597 million of the USD1,250 million subordinated notes in December 2025, both Basel III compliant Tier 2 Capital instruments.

Regulatory Framework

The APRA prudential standards prescribe a minimum CET1 capital ratio of 10.25% for Internal Ratings-based (IRB) ADIs such as CBA, comprising of a minimum Prudential Capital Requirement (PCR) of 4.5% and a capital conservation buffer (CCB) of 5.75%, which includes a Domestic Systemically Important Bank (D-SIB) buffer of 1% and a baseline countercyclical capital buffer (CCyB) set at 1%¹. The CCyB, which may be varied by APRA in the range of 0%-3.5%, can be released in times of systemic stress and post-stress recovery.

The minimum Tier 1 Capital requirement as at 31 December 2025 was 11.75%.

To satisfy APRA's loss-absorbing capacity (LAC) requirements, the minimum Total Capital ratio requirement for D-SIBs, including CBA, has increased from 16.75% to 18.25% effective from 1 January 2026.

Regulatory Developments

Additional Tier 1 Capital

On 4 December 2025, APRA finalised the consequential amendments to the bank prudential framework to phase out Additional Tier 1 Capital (AT1) instruments. Large, internationally active banks such as CBA will be able to replace the current 1.5% of AT1 Capital with 0.25% of CET1 Capital and 1.25% of Tier 2 Capital. The CET1 minimum requirement, inclusive of regulatory buffers, will increase to 10.50%, whilst Total Capital requirement will remain unchanged at the 1 January 2026 level of 18.25%.

Existing AT1 instruments will be eligible to be included as Tier 2 Capital from this date until their first scheduled call date. During the transition period, the legal terms of AT1 instruments will remain in effect, with AT1 Capital absorbing losses ahead of Tier 2 in a resolution event.

The leverage ratio and limits on large and related-party exposures will be measured on a CET1 Capital basis. For IRB banks such as CBA, the minimum leverage ratio requirement will decrease from 3.5% to 3.25%.

These changes will be effective from 1 January 2027.

New Zealand bank capital adequacy requirements

On 17 December 2025, the Reserve Bank of New Zealand (RBNZ) released the final capital settings for New Zealand deposit takers.

For Group 1 deposit takers such as ASB, the changes include a lower CET1 capital requirement of 12%, removal of AT1 capital instruments and the introduction of a 6% LAC requirement which may be met with Tier 2 capital, increasing the Total Capital requirement to 21%. All Tier 2 and LAC requirements must be internally issued to the Australian parent bank, such as CBA.

The RBNZ expects to further consult on the components of these changes across 2026 and 2027 prior to publishing the final standards by 31 May 2027, with phased implementation commencing 1 December 2028.

Traded Market Risk and Counterparty Credit Risk

APRA is yet to commence consultation on revisions to APS 116 *Capital Adequacy: Market Risk*, and APS 180 *Capital Adequacy: Counterparty Credit Risk*.

¹ In November 2025, APRA announced that the CCyB for Australian exposures will remain at 1%. The Group has limited exposures to those offshore jurisdictions which a CCyB in excess of 0% has been imposed.

Refer to tables CC1 and CC2 in *Appendices* for the details of the calculation of the Group's regulatory capital.

4

Leverage Ratio

The Group's leverage ratio, defined as Tier 1 Capital as a percentage of total exposures, was 4.7% as at 31 December 2025 in line with the prior half with capital generated from earnings offset by higher exposures and the payment of the 2H25 dividend.

The minimum leverage ratio requirement for IRB banks, such as CBA, is 3.5%. From 1 January 2027, leverage ratio will be measured on a CET1 Capital basis, with the minimum requirement reducing to 3.25%.

Summary Group Leverage Ratio	31 Dec 25	30 Jun 25	31 Dec 24
Tier 1 Capital (\$M)	69,829	68,874	68,143
Total Exposures (\$M) ¹	1,497,194	1,453,694	1,393,974
Leverage Ratio (%)	4.7	4.7	4.9

¹ Total exposures is the sum of on balance sheet exposures, derivatives, securities financing transactions (SFTs), and off-balance sheet exposures, net of any Tier 1 regulatory deductions, as outlined in APS 110 *Capital Adequacy* (APS 110).

Refer to tables LR1 and LR2 in *Appendices* for the details of the calculation of the leverage ratio.

5 Risk Weighted Assets

RWA are calculated using the AIRB approach for the majority of the Group's credit risk exposures and using the Foundation or Standardised approach as required under the Australian prudential standards. For CBA's New Zealand Subsidiary, ASB, RWA are calculated using the RBNZ prudential rules subject to certain APRA-prescribed adjustments. The Group must use the External Ratings-based Approach where a securitisation exposure is externally rated by an External Credit Assessment Institution (ECAI) or for which an inferred rating is available. Where the Group cannot use the External Ratings-based Approach, the Group must use the Supervisory Formula Approach.

	31 Dec 25 \$M	30 Jun 25 \$M	31 Dec 24 \$M
Risk Weighted Assets			
Credit Risk	409,119	398,928	385,117
of which: IRB (excluding counterparty credit risk)	375,267	363,693	349,191
of which: counterparty credit risk and other ¹	33,852	35,235	35,926
Traded Market Risk	9,971	9,752	7,949
Interest Rate Risk in the Banking Book	35,179	39,841	41,679
Operational Risk	51,041	47,624	47,624
Total Risk Weighted Assets	505,310	496,145	482,369

¹ Includes credit valuation adjustment, securitisation, standardised portfolios and settlement risk RWA.

Total Group RWA¹

Total RWA increased \$9.2 billion on the prior half to \$505.3 billion, mainly driven by higher Credit RWA, Operational Risk RWA and Traded Market Risk RWA, partly offset by lower IRRBB RWA.

¹ Due to rounding, numbers presented in this section may not sum precisely to the totals provided.

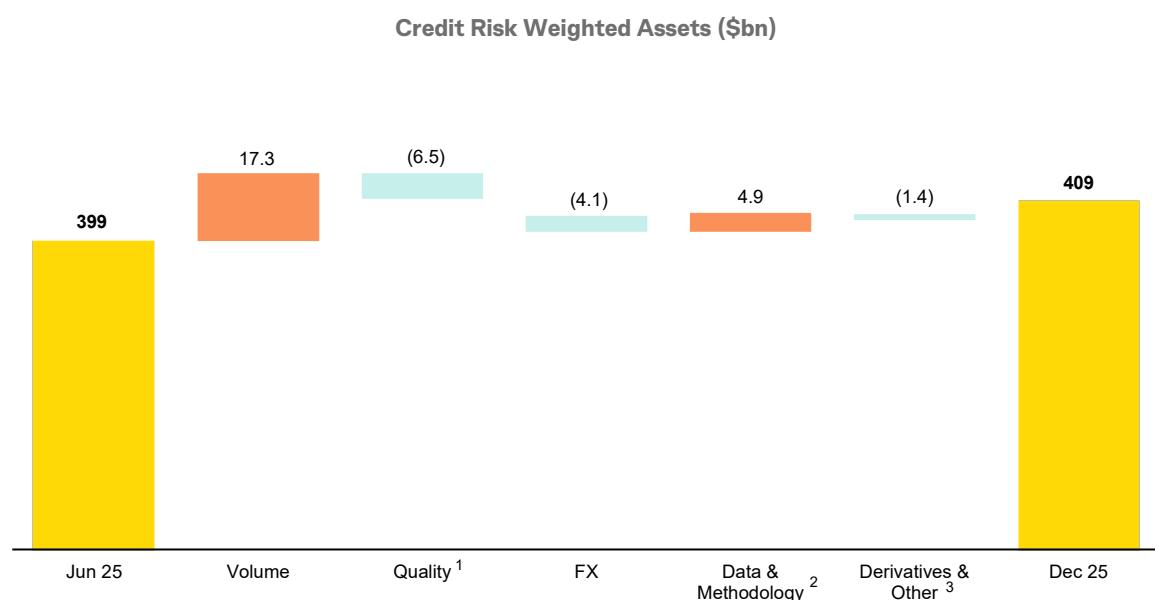

Risk Weighted Assets (continued)

Risk Weighted Assets (continued)

Credit Risk RWA

Credit risk RWA increased \$10.2 billion or 2.6% on the prior half to \$409.1 billion. The key drivers include:

- Volume growth (increase of \$17.3 billion) across commercial portfolios, domestic residential mortgages and New Zealand portfolios; and
- Data & methodology (increase of \$4.9 billion) due to an increase in the residential mortgage overlay; partly offset by
- Credit quality improvement (decrease of \$6.5 billion) primarily from lower risk weights for residential mortgages;
- Foreign currency movements (decrease of \$4.1 billion); and
- Derivatives and other (decrease of \$1.4 billion) mainly from lower derivatives.

¹ Credit quality includes portfolio mix.

² Includes data and methodology, credit risk estimates changes and regulatory treatments.

³ Includes credit valuation adjustment, securitisation, standardised portfolios and settlement risk RWA.

Traded Market Risk RWA

Traded Market Risk RWA increased \$0.2 billion or 2% on the prior half to \$10.0 billion.

Interest Rate Risk in the Banking Book (IRRBB) RWA

IRRBB RWA decreased \$4.7 billion or 12% on the prior half to \$35.2 billion, driven by the implementation of the revised APS 117, effective 1 October 2025, partly offset by the impact of higher long-term interest rates in Australia reducing embedded gains.

Operational Risk RWA

The increase in Operational Risk RWA by \$3.4 billion or 7.2% on the prior half to \$51.0 billion was primarily driven by higher average net interest income over the years ended 30 June 2025, 2024 and 2023 due to higher interest rates and lending growth.

Risk Weighted Assets (continued)

OV1: Overview of RWA

The following table provides an overview of total RWA by risk types with further details on the key drivers of the movements in RWA provided on pages 13 to 14.

	RWA			Minimum capital requirements ¹

Total			1,389,412			398,928

¹ Includes central counterparties.

² Includes non-retail overlays of \$0.5 billion and IPRE risk weight floor of \$2.6 billion.

³ Includes a \$2.4 billion self-imposed residential mortgage risk weight floor.

⁴ Includes immaterial contributions from other standardised asset classes, including domestic public sector entities, commercial property, land acquisition, development and construction, and bank.

Risk Weighted Assets (continued)

CMS1: Comparison of modelled and standardised RWA at risk level

The Group is predominantly accredited to use its own internal models to determine the capital requirements for Credit Risk, Market Risk and IRRBB. APRA's ADI capital framework has been calibrated such that the capital requirements using the internal model methods tend to be lower than standardised capital requirements. This calibration has the policy objectives of encouraging investment by banks in advanced modelling capabilities and associated technology, data and specialist skills and enabling banks to more accurately allocate capital for risk.

The Group's total RWA is above the 72.5% minimum set by the BCBS and APRA as a safeguard to ensure that the capital benefit for advanced banks is not excessive and does not unfairly disadvantage standardised banks.

The following table provides details of the comparison of modelled and standardised RWA by risk type. Details on the key drivers of the movements in RWA are provided on pages 13 to 14.

	31 December 2025			
	RWA for modelled approaches that banks have supervisory approval to use	RWA for portfolios where standardised approaches are used	Total Actual RWA	RWA calculated using full standardised approach (ie used in the base of the output floor)
	\$M	\$M	\$M	\$M
1 Credit risk (excluding counterparty credit risk)	375,267	19,138	394,405	597,994
2 Counterparty credit risk	6,939	345	7,284	15,655
3 Credit valuation adjustment	n/a	3,327	3,327	3,327
4 Securitisation exposures in the banking book	–	4,096	4,096	4,096
5 Market risk	8,574	1,397	9,971	9,971
Interest rate risk in banking book	35,179	–	35,179	–
6 Operational risk	n/a	51,041	51,041	51,041
7 Residual RWA	n/a	7	7	7
8 Total	425,959	79,351	505,310	682,091

	30 June 2025			
	RWA for modelled approaches that banks have supervisory approval to use	RWA for portfolios where standardised approaches are used	Total Actual RWA	RWA calculated using full standardised approach (ie used in the base of the output floor)
	\$M	\$M	\$M	\$M
1 Credit risk (excluding counterparty credit risk)	363,693	19,310	383,003	574,094
2 Counterparty credit risk	7,659	394	8,053	17,034
3 Credit valuation adjustment	n/a	3,841	3,841	3,841
4 Securitisation exposures in the banking book	–	4,031	4,031	4,031
5 Market risk	7,918	1,834	9,752	9,752
Interest rate risk in banking book	39,841	–	39,841	–
6 Operational risk	n/a	47,624	47,624	47,624
7 Residual RWA	n/a	–	–	–
8 Total	419,111	77,034	496,145	656,376

The difference between internally modelled RWA and the associated full standardised approach RWA for credit risk is mainly driven by residential mortgage and corporate (including large and SME corporate) asset classes.

Risk Weighted Assets (continued)

CMS2: Comparison of modelled and standardised RWA for credit risk at asset class level

The table below provides details of the comparison of modelled and standardised credit RWA at asset class level. Details on the key drivers of the movements in credit RWA are provided on page 14.

	31 December 2025			
	RWA for modelled approaches that banks have supervisory approval to use	RWA for column (a) if re-computed using the standardised approach	Total Actual RWA	RWA calculated using full standardised approach (ie used in the base of the output floor)

¹ Includes immaterial contributions from other standardised asset classes, including Domestic public sector entities, Commercial property, Land acquisition, development and construction, and Bank.

6 Credit Risk

6.1 Credit quality, non-performing exposures and provisions

CR1: Credit quality of assets

The table below provides an overview of the credit quality of the Group's lending assets and debt securities.

		31 December 2025							
		Gross carrying values of			Of which ECL accounting provisions for credit losses on SA exposures		Of which ECL accounting provisions for credit losses on IRB exposures		Net values
		Non-performing exposures \$M	Performing exposures \$M	Allowances / impairments \$M	Allocated in regulatory category of Specific \$M	Allocated in regulatory category of General \$M			\$M
1	Loans	10,199	1,013,603	6,002	91	113	5,798	1,017,800	
2	Debt securities	–	109,148	8	–	3	5	109,140	
3	Off-balance sheet exposures	251	234,507	323	1	17	305	234,435	
4	Total	10,450	1,357,258	6,333	92	133	6,108	1,361,375	

		30 June 2025							
		Gross carrying values of			Of which ECL accounting provisions for credit losses on SA exposures		Of which ECL accounting provisions for credit losses on IRB exposures		Net values
		Non-performing exposures \$M	Performing exposures \$M	Allowances / impairments \$M	Allocated in regulatory category of Specific \$M	Allocated in regulatory category of General \$M			\$M
1	Loans	10,627	980,108	5,966	48	115	5,803	984,769	
2	Debt securities	–	101,567	4	–	1	3	101,563	
3	Off-balance sheet exposures	352	224,824	402	1	4	397	224,774	
4	Total	10,979	1,306,499	6,372	49	120	6,203	1,311,106	

For the definition of a non-performing exposure refer to the *Glossary*.

Credit Risk (continued)

6.1 Credit quality, non-performing exposures and provisions (continued)

CR2: Changes in stock of non-performing loans and debt securities

The table below shows changes in gross carrying amount of non-performing loans, debt securities and off-balance sheet instruments during the half years ended 31 December 2025 and 30 June 2025.

	For the half year ended	
	31 Dec 25	30 Jun 25
Movement in non-performing loans, debt securities and off-balance sheet instruments	\$M	\$M
1 Non-performing loans, debt securities and off-balance sheet instruments at end of the previous reporting period	10,979	10,297
2 Loans, debt securities and off-balance sheet instruments that became non-performing since the last reporting period	3,572	4,241
3 Returned to performing status	(2,056)	(1,922)
4 Amounts written off	(415)	(386)
5 Other changes	(1,630)	(1,251)
6 Non-performing loans, debt securities and off-balance sheet instruments at end of the reporting period	10,450	10,979

Non-performing exposures decreased \$0.5 billion or 5% on the prior half to \$10.5 billion driven by lower arrears in the residential mortgages portfolio in addition to net upgrades and external refinancing in the corporate portfolio.

Credit Risk (continued)

6.1 Credit quality, non-performing exposures and provisions (continued)

CRB(e)(i): Credit exposures by portfolio type and geographic distribution

The following tables provide supplementary breakdown of exposures by geographical areas. The tables exclude derivative and SFTs exposures subject to counterparty credit risk requirements, equity and securitisation exposures.

Portfolio Type	31 December 2025			
	Australia \$M	New Zealand \$M	Other \$M	Total \$M
Corporate (incl. Large and SME corporate)	236,441	3,474	9,910	249,825
Sovereign	112,794	473	33,881	147,148

¹ SME retail business lending secured by residential property has been allocated by industry.

² Includes immaterial contributions from other standardised asset classes, including domestic public sector entities, commercial property, land acquisition, development and construction, and bank.

³ Commercial Property includes Real Estate Investment Trusts (REITs) and excludes Business Services.

Total credit exposures increased by \$47.9 billion or 4% on the prior half to \$1,379.8 billion primarily driven by the following sectors:

- Consumer increased \$27.5 billion or 3% on the prior half to \$856.4 billion due to the volume growth in domestic residential mortgages portfolio;
- Commercial Property increased by \$5.8 billion or 6% to \$103.3 billion due to exposures growth to Residential property from development activity; and
- Government Administration and Defence increased by \$5.3 billion or 4% to \$159.2 billion mainly due to growth in High Quality Liquid assets and high grade bonds.

Credit Risk (continued)

6.1 Credit quality, non-performing exposures and provisions (continued)

CRB(f)(i): Non-performing exposures, related provisions and actual losses by industry sector

The following table provides information about non-performing exposures, specific provisions and actual losses by industry.

Industry Sector	31 December 2025		
	Non performing exposures ¹ \$M	Specific provision balance \$M	Half year actual losses ² \$M
Consumer	7,819	560	242

Entertainment, Leisure & Tourism	218	112	4
Health & Community Services	236	127	1
Other	163	39	6
Total	10,297	1,489	290

¹ Excludes non-performing exposures in securitisation entities that meet APRA's operational requirements for regulatory capital relief under APS 120 *Securitisation*.

² Losses stemming from lower risk IPRE lending and overall losses from IPRE lending are less than 0.3% and 0.5% of outstanding IPRE exposures, respectively, in each of the past 3 years to 31 December 2024.

Non-performing exposures decreased \$0.5 billion or 5% on the prior half to \$10.5 billion primarily driven by lower arrears in the residential mortgages portfolio in addition to net upgrades and external refinancing in the corporate portfolio.

Specific provisions reduced by \$54 million or 4% on the prior half to \$1,463 million primarily due to lower individually assessed provisions in relation to the residential mortgages portfolio driven by strong house prices as well as a few single name customers in the health and community services industry. This was partially offset by an increase related to a single name customer in the manufacturing industry.

Credit Risk (continued)

6.1 Credit quality, non-performing exposures and provisions (continued)

Credit Risk (continued)

6.1 Credit quality, non-performing exposures and provisions (continued)

CRB(f)(iii): Non-performing exposures and related provisions by geographic region

The following table provides information about non-performing exposures and the related provisions by geographic region.

Geographic Region ¹	31 December 2025		
	Non performing exposures ²	Specific provision balance	General provision balance
	\$M	\$M	\$M
Australia	8,865	1,240	4,432
New Zealand	1,537	217	339
Other	48	6	101
Total	10,450	1,463	4,872

1 Balances are reported based on the risk domicile of the borrower.

2 Excludes non-performing exposures in securitisation entities that meet APRA's operational requirements for regulatory capital relief under APS 120 *Securitisation*.

Geographic Region ¹	30 June 2025		
	Non performing exposures ²	Specific provision balance	General provision balance
	\$M	\$M	\$M
Australia	9,054	1,258	4,311
New Zealand	1,873	245	383
Other	52	14	166
Total	10,979	1,517	4,860

1 Balances are reported based on the risk domicile of the borrower.

2 Excludes non-performing exposures in securitisation entities that meet APRA's operational requirements for regulatory capital relief under APS 120 *Securitisation*.

Geographic Region ¹	31 December 2024		
	Non performing exposures ²	Specific provision balance	General provision balance
	\$M	\$M	\$M
Australia	8,265	1,250	4,275
New Zealand	1,867	229	369
Other	165	10	94
Total	10,297	1,489	4,738

1 Balances are reported based on the risk domicile of the borrower.

2 Excludes non-performing exposures in securitisation entities that meet APRA's operational requirements for regulatory capital relief under APS 120 *Securitisation*.

Specific provisions reduced by \$54 million or 4% on the prior half to \$1,463 million primarily due to lower individually assessed provisions in the residential mortgages portfolio as well as a few single name customers in the corporate portfolios.

General provisions increased marginally by \$12m or 0.2% on the prior half to \$4,872 million.

Credit Risk (continued)

6.2 Portfolios subject to standardised and supervisory risk weights

CR4: Standardised approach – credit risk exposure and credit risk mitigation effects

The table below provides information about the effect of credit risk mitigation techniques by portfolio using regulatory exposure amounts. The table excludes derivative and SFTs exposures subject to counterparty credit risk requirements, equity and securitisation exposures.

EAD post-CCF and post-Credit Risk Management (CRM) is derived by applying relevant CCFs to committed but undrawn exposures and provisions are deducted from the outstanding drawn non-performing balances. The Group does not apply Credit Risk Mitigation Instrument (CRMI) on the standardised portfolio.

Total		8,222	1,950		4,585	402	402	3,897	9,286	8,200	188

1 Includes \$4.0 billion of exposures and \$3.9 billion RWA in relation to specialised lending exposures in the Group's RBNZ regulated entities. Pursuant to APRA requirements, the related RWA amounts have been multiplied by a scaling factor of 1.10.

2 Risk-weight (%) exclude APRA's 1.1 scaling factor for specialised lending exposures of the RBNZ regulated banking subsidiary, whereas RWA (\$m) is after application of this scaling factor.

CR7: IRB - Effect on RWA of credit derivatives used as CRM techniques

The table below provides a breakdown of IRB credit risk RWAs before and after credit derivatives CRM effects. The table excludes derivative and SFT exposures subject to counterparty credit risk requirements, equity, and securitisation exposures. The use of credit derivatives as a CRM technique has an insignificant impact on the Group's RWA.

Portfolio Type	31 December 2025	
	Pre-credit derivatives RWA	Actual RWA

6.4 Credit risk mitigation

CR3: Credit risk mitigation techniques overview

The table below provides a breakdown of loans and advances and debt securities by different credit risk mitigation techniques. Amounts presented are net of provisions for credit losses.

	31 December 2025				
	Exposures unsecured: carrying amount	Exposures to be secured	Exposures secured by collateral	Exposures secured by financial guarantees ¹	Exposures secured by credit derivatives
	\$M	\$M	\$M	\$M	\$M
1 Loans	65,954	951,846	951,127	719	–
2 Debt securities	107,825	1,315	1,315	–	–
3 Total	173,779	953,161	952,442	719	–
4 Of which non-performing	131	8,613	8,613	–	–

¹ Includes \$684 million of financial guarantees provided by financial institutions and \$35 million provided by sovereign counterparties.

	30 June 2025				
	Exposures unsecured: carrying amount	Exposures to be secured	Exposures secured by collateral	Exposures secured by financial guarantees ¹	Exposures secured by credit derivatives
	\$M	\$M	\$M	\$M	\$M
1 Loans	64,382	920,387	919,756	631	–

3 Total	164,903	921,429	920,798	631	–
4 Of which non-performing	100	9,117	9,117	–	–

¹ Includes \$573 million of financial guarantees provided by financial institutions and \$58 million provided by sovereign counterparties.

7

Counterparty Credit Risk

CCR1: Analysis of CCR exposures by approach

The table below provides the capital requirements for CCR exposures by approach. The table excludes exposures to central counterparties (CCPs). Exposures to CCPs are disclosed in table CCR8.

		31 December 2025			
		Replacement cost	Potential future exposure	Alpha used for computing regulatory EAD	EAD post-CRM
		\$M	\$M		\$M
1	SA-CCR (for derivatives)	4,966	11,335	1.4	22,752
	Current exposure method (for derivatives)				50
4	Comprehensive Approach for credit risk mitigation (for SFTs)				3,978
	RBNZ regulated entities ¹				411
6	Total				7,084

1 Includes \$373 million of EAD and \$175 million of RWA in relation to CCR derivative exposures under the current exposure method and \$38 million of EAD and \$7 million of RWA in relation to CCR SFT exposures under the comprehensive approach for credit risk mitigation.

		30 June 2025			
		Replacement cost	Potential future exposure	Alpha used for computing regulatory EAD	EAD post-CRM
		\$M	\$M		\$M
1	SA-CCR (for derivatives)	6,082	11,214	1.4	24,133
	Current exposure method (for derivatives)				54
4	Comprehensive Approach for credit risk mitigation (for SFTs)				3,475
	RBNZ regulated entities ¹				935
6	Total				7,837

1 Includes \$432 million of EAD and \$210 million of RWA in relation to CCR derivative exposures under the current exposure method and \$503 million of EAD and \$3 million of RWA in relation to CCR SFT exposures under the comprehensive approach for credit risk mitigation.

Counterparty Credit Risk (continued)

CCR3: Standardised approach – CCR exposures by regulatory portfolio and risk weights

The table below provides a breakdown of CCR exposures subject to the standardised approach by portfolio and risk weight. The table excludes exposures cleared through CCPs.

Portfolio Type	31 December 2025								Total credit exposure	
	Risk weight									
	0%	10%	20%	50%	75%	100%	150%	Others

Market Risk

Traded market risk

Traded market risk by Modelling Method

The breakdown of RWA for traded market risk by modelling method is summarised in the table below.

Traded Market Risk RWA by Modelling Approach	31 Dec 25 \$M	30 Jun 25 \$M	31 Dec 24 \$M
Internal model approach	8,574	7,918	6,491
Standard method	1,397	1,834	1,458
Total Traded Market Risk RWA	9,971	9,752	7,949

Traded market risk under the standard method

The capital requirement for traded market risk under the standard method is disclosed in following table.

Exposure Type	31 Dec 25 \$M	30 Jun 25 \$M	31 Dec 24 \$M
Interest rate risk	111.8	146.7	116.6
Equity risk	—	—	—
Foreign exchange risk	—	—	—
Commodity risk	—	—	—
Total	111.8	146.7	116.6
Risk Weighted Asset equivalent¹	1,397	1,834	1,458

¹ Risk Weighted Assets equivalent is the capital requirements multiplied by 12.5 in accordance with APS 110.

Market Risk (continued)

Traded market risk (continued)

Traded market risk under the internal model

The VaR and SVaR results calculated under the internal model approach are summarised in following table.

	Aggregate VaR Over the Reporting Period			
	Mean value	Maximum value	Minimum value	As at balance date
Average VaR ¹	\$M	\$M	\$M	\$M
Over the 6 months to 31 December 2025	44	55	36	55
Over the 6 months to 30 June 2025	39	49	29	41
Over the 6 months to 31 December 2024	50	81	32	39

1 10 day, 99.0% confidence interval over the reporting period.

	Aggregate SVaR Over the Reporting Period			
	Mean value	Maximum value	Minimum value	As at balance date
Stressed VaR ¹	\$M	\$M	\$M	\$M
Over the 6 months to 31 December 2025	185	214	158	198
Over the 6 months to 30 June 2025	140	193	79	171
Over the 6 months to 31 December 2024	138	211	80	192

1 10 day, 99.0% confidence interval over the reporting period.

Traded market risk (continued)

Internal model approach – back-test results

The Internal model is subject to back-testing against hypothetical profit and loss. In the 6 months to 31 December 2025 there were no back-test outlier. The back-test results are summarised in the tables below. A comparison of VaR with actual gains or losses during the 6 months to 31 December 2025 are illustrated in a table below.

Summary Table of the Number of Back-Testing Outliers ¹

Over the 6 months to 31 December 2025	–
Over the 6 months to 30 June 2025	1
Over the 6 months to 31 December 2024	–

1 10 day, 99.0% confidence interval over the reporting period.

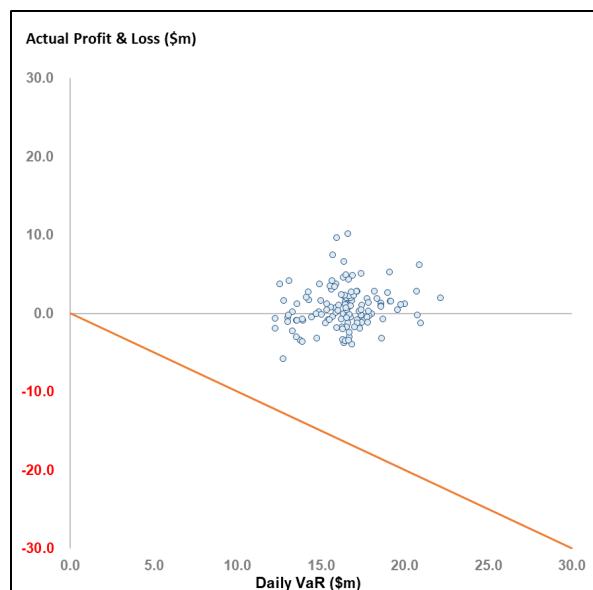

Details of back-testing outliers

Over the Reporting Period 1 Jul 2025 to 31 Dec 2025		
Date	Hypothetical loss \$M	VaR 99% \$M
	–	–

Over the Reporting Period 1 Jan 2025 to 30 Jun 2025		
Date	Hypothetical loss \$M	VaR 99% \$M
4 April 2025	32	16

Over the Reporting Period 1 Jul 2024 to 31 Dec 2024		
Date	Hypothetical loss \$M	VaR 99% \$M
	–	–

Comparison of VaR estimates outliers with actual gains/losses experiences for the 6 months ended 31 December 2025

Market Risk (continued)

Non-traded market risk

Interest Rate Risk in the Banking Book

IRRBB RWA decreased \$4.7 billion or 12% on the prior half to \$35.2 billion, driven by the implementation of the revised APS 117, effective 1 October 2025, partly offset by higher long-term interest rates in Australia reducing embedded gains.

Regulatory RWA	31 Dec 25 \$M	30 Jun 25 \$M	31 Dec 24 \$M
Interest rate risk in the banking book	35,179	39,841	41,679

IRRBA: IRRBB risk management objectives and policies

IRRBB refers to the risk to the Group's capital and earnings that arises from adverse movements in interest rates and spreads. This risk materialises through changes in the economic value of assets and liabilities, or through variability in net interest income, due to mismatches in the repricing characteristics of balance sheet items.

Risk management and governance

IRRBB risk management operates in accordance with Group's risk management framework to identify, measure, monitor and respond to material IRRBB risks. The risk management of IRRBB is enabled by appropriate governance, reporting, policies, procedures, standards, infrastructure, data, accountabilities within a 3LoA approach and skilled staff.

Group Audit & Assurance (GA&A) is the Internal Audit function of the CBA Group. It provides independent and objective assurance to the Board Audit Committee (BAC), Board Risk and Compliance Committee (BRCC) and Board People and Remuneration Committee (BPRC) Committees of the CBA Board of Directors. As part of its responsibilities, it conducts independent reviews of the risk management framework for IRRBB in accordance with Prudential Standard APS 117 *Capital Adequacy: Interest Rate Risk in the Banking Book* (APS 117) (effective 1 October 2025 paragraph 59). Its independent reviews include effectiveness of the model governance of the risk measurement models and associated documentation from Line 1 and Line 2 Model Risk and Validation in accordance with the CBA Audit Methodology and the Prudential Guide APG 117 *Capital Adequacy: IRRBB* (APG 117).

Banking net interest income sensitivity and economic value of equity sensitivity

Banking book activities include lending, investing in liquid assets, deposit taking, issuing wholesale funding and managing capital. These activities generate interest income and expense, and expose the Group to interest rate risk which arises as a result of inherent mismatches in the interest rate repricing of assets and liabilities. Because of these mismatches, changes in interest rates can create volatility and adversely affect both the earnings and capital within the banking book.

The Group measures and manages the impact of interest rate risk in two key ways:

- Next 12 Months' Earnings Interest rate risk from an earnings perspective is the impact based on changes to the net interest income over the next 12 months. The risk to net interest income over the next 12 months from changes in interest rates is measured on a monthly basis. Earnings risk is measured through a sensitivity analysis which applies an instantaneous 200 basis point parallel shock in interest rates across the yield curve. The prospective change to net interest income is measured by using an Asset and Liability Management simulation model. Assets and liabilities that reprice directly from observable market rates are measured based on the full extent of the rate shock that is applied. Products that are priced based on Group administered or discretionary interest rates and that are impacted by customer behaviour are measured by taking into consideration the historic repricing strategy of the Group; and
- Market Value Sensitivity (MVS) measures the potential economic value loss of the balance sheet under adverse market conditions. It is defined as the largest loss across three prescribed repricing scenarios and a historical simulation of diversified and undiversified interest rate and spread movements. These historical movements are modelled using eight years of 10-day overlapping intervals, scaled to a one-year horizon, and assessed at a 97.5% expected shortfall confidence level.

Active management of IRRBB

Methods such as interest rate sensitivity, change in market value sensitivity, change in net interest income, stress testing, and internal capital adequacy assessment procedures are used to measure and analyse the risk. The established IRRBB limits and early warning indicators cascading from Board to desk level ensures risks are actively managed within risk appetite via implementing hedging strategies which are supported by collaborative engagement between line 1 and line 2 to ensure emerging risks are proactively managed. Early warnings and breach handling mechanisms, daily IRRBB stress testing and risk metric monitoring are integrated into the management decision-making process.

The Group's banking subsidiaries, ASB and CBA Europe N.V., each manage their own domestic IRRBB in accordance with their respective risk management policies and the policies of the Group. The Group's objective is to manage interest rate risk to achieve stable and sustainable earnings over the long term.

The Group applies hedge accounting to align derivative gains and losses with the exposures they hedge. Hedges are designated as fair value, cash flow, or net investment hedges, with formal documentation, strict effectiveness testing, and the recognition of gains or losses in profit or loss or other comprehensive income, as appropriate.

Market Risk (continued)

Non-traded market risk (continued)

IRRBA: IRRBB risk management objectives and policies (continued)

Interest rate shock and stress scenarios

IRRBB Stress Testing is used to assess the impact of severe yet plausible adverse interest rate movements (that may not have occurred in the past) on the Group's capital and earnings. The results are used to identify balance sheet vulnerabilities, to inform management of IRRBB risk and to guide policy and limit design and setting. The scenarios are a combination of standardised shocks (e.g. the six Bank for International Settlements standard outlier tests) and scenario narratives (e.g. a severe inflation shock).

Modelling

The Group's Model Risk Framework includes policy, standards and procedures as well as governance committees and a Group Model Register (GMR). This framework applies to IRRBB models and requires the model owner to document the model, including the assumptions, and the independent model validator is required to review and challenge the assumptions in their independent model validation report. The validation report is required for model assurance and is part of the model approval process. The report includes model findings which inform the model's overall (fit-for-purpose) risk rating. The findings, including those related to assumptions, are recorded in the GMR where they are tracked to resolution. IRRBB models are subject to regular review at the model technical sub-committee and materiality-based re-validation to ensure that they remain fit-for-purpose, are appropriate for changing market conditions and subjected to regular model monitoring. Design, documentation, operation, data, change, assumptions, limitations (gaps), performance and operation under stress are all considered throughout the life of a model.

For Economic Value sensitivities, CBA splits the balance sheet in-line with the market-related/non-market-related split as prescribed in APS117. The economic value of non-market-related items are measured off a funding centre value (which excludes margins), while market-related items are fully revalued based on market pricing (including margins). CBA has very few products that require prepayment rates (CPR) to be applied. When required, CPRs are based on historic prepayment analysis of the underlying product.

For NII sensitivities, CBA assumes a constant balance sheet, and projects interest income inclusive of margins. Individual products margins are assumed to be stable over the forward period and all new business is assumed to be variable rate so that it does not introduce new interest rate risk into future periods. All customer pricing is floored at 0%. Deposits with discretionary interest rates have pass-on percentage assumptions applied relative to moves in the cash rate. The pass-on assumptions for interest bearing non-maturity deposits are modelled within the approved models based on historical pass-through behaviour. The average repricing maturity for non-maturity deposits is also assessed within the approved deposit models with a maximum reprice term of 5 years.

The Group does not have any internal modelling assumptions that significantly deviate from the disclosed modelling outputs for IRRBB.

Quantitative information on IRRBB

The average repricing maturity for non-maturity deposits, as of 31 December 2025, was 2.5 years and the longest repricing maturity permitted under APS 117 is 5 years.

10 Operational Risk

OR2: Business indicator and subcomponents

The table below provides information in relation to the business indicator (BI) and its subcomponents used in the calculation of the Group's operational risk capital and RWA for the period from 30 September 2025 to 31 December 2025.

BI and its subcomponents	30 Jun 25 \$M	30 Jun 24 \$M	30 Jun 23 \$M
1 Interest, lease and dividend component^{1 2}	21,586		
1a Interest and lease income	61,393	57,467	43,214
1b Interest and lease expense	39,580	36,663	21,288
1c Interest earning assets ³	1,295,435	1,208,556	1,200,232
1d Dividend income	137	55	25
2 Services component^{1 4}	3,484		
2a Fee and commission income	3,134	3,023	2,818
2b Fee and commission expense	87	88	86
2c Other operating income	217	139	202
2d Other operating expense	646	556	274
3 Financial component^{1 5}	2,452		
3a Net P&L on the trading book	2,990	2,384	1,445
3b Net P&L on the banking book	61	307	168
4 BI⁶	27,522		
5 Business indicator component (BIC) ⁷	4,083		

Disclosure on the BI:

6a BI gross of excluded divested activities	27,522
6b Reduction in BI due to excluded divested activities	—

- Business indicator components represent averages for the most recent three financial years.
- The interest, lease and dividend component is calculated as the lesser of the average net interest and lease income and 2.25% of interest earning assets, plus the average of dividend income.
- Interest earning assets as at the end of each financial year.
- The services component is calculated as the higher of the average fee and commission income and expense, plus the higher of the average other operating income and expense.
- The financial component is calculated as the sum of the average net profit or loss on the trading and banking book.
- Business indicator is a sum of the interest, lease and dividend component, services component and financial component.
- Calculated as the business indicator multiplied by 12%, plus 3% of the amount by which the business indicator exceeds \$1.5 billion.

Operational Risk (continued)

OR2: Business indicator and subcomponents (continued)

The table below provides information in relation to the business indicator (BI) and its subcomponents used in the calculation of the Group's operational risk capital and RWA for the period from 30 September 2024 to 30 June 2025.

BI and its subcomponents	30 Jun 24	30 Jun 23	30 Jun 22
	\$M	\$M	\$M
1 Interest, lease and dividend component^{1 2}	20,540		
1a Interest and lease income	57,467	43,214	23,973

1d Dividend income	55	25	–
2 Services component^{1 4}	3,286		
2a Fee and commission income	3,023	2,818	2,896
2b Fee and commission expense	88	86	119
2c Other operating income	139	202	204
2d Other operating expense	556	274	292
3 Financial component^{1 5}	1,873		
3a Net P&L on the trading book	2,384	1,445	797
3b Net P&L on the banking book	307	168	518
4 BI⁶	25,699		
5 Business indicator component (BIC)⁷	3,810		

Disclosure on the BI:

6a BI gross of excluded divested activities	25,773
6b Reduction in BI due to excluded divested activities ⁸	(74)

- Business indicator components represent averages for the most recent three financial years.
- The interest, lease and dividend component is calculated as the lesser of the average net interest and lease income and 2.25% of interest earning assets, plus the average of dividend income.
- Interest earning assets as at the end of each financial year.
- The services component is calculated as the higher of the average fee and commission income and expense, plus the higher of the average other operating income and expense.
- The financial component is calculated as the sum of the average net profit or loss on the trading and banking book.
- Business indicator is a sum of the interest, lease and dividend component, services component and financial component.
- Calculated as the business indicator multiplied by 12%, plus 3% of the amount by which the business indicator exceeds \$1.5 billion.
- The Group completed the sale of PT Bank Commonwealth (PTBC) on 1 May 2024. The calculation of the BI excludes the divested activities of PTBC.

Operational Risk (continued)

OR3: Minimum required operational risk capital

The table below presents the operational risk regulatory capital requirements.

	31 Dec 25 \$M	30 Jun 25 \$M
1 Business indicator component (BIC)	4,083	3,810
2 Internal loss multiplier (ILM) ¹	n/a	n/a
3 Minimum required operational risk capital (ORC)	4,083	3,810
Other regulatory capital charges	—	—
4 Operational risk RWA ²	51,041	47,624

1 APS 115 does not prescribe an internal loss multiplier.

2 Operational risk RWA is operational risk capital multiplied by 12.5.

Operational risk RWA increased \$3.4 billion or 7.2% on the prior half to \$51.0 billion following the annual update of the business indicator component of operational risk capital based on the Group's 2025 financial report. The increase was driven by higher average net interest income over the years ended 30 June 2025, 2024 and 2023 due to higher interest rates and lending growth.

11 Liquidity Risk

LIQ1: Liquidity Coverage Ratio

The Group calculates its LCR position on a daily basis, ensuring a buffer is maintained over the minimum regulatory requirement of 100% and the Board's risk appetite. The Group maintained an average LCR of 132% in the December 2025 quarter. On a spot basis, the LCR ranged between 123% and 142% over the quarter.

The Group's mix of liquid assets consists of HQLA, such as cash, deposits with central banks, Australian semi-government and Commonwealth government securities. Liquid assets also include securities classified as liquid assets by the RBNZ. Liquid assets are distributed across the Group to support regulatory and internal requirements and are consistent with the distribution of liquidity needs by currency. Average liquid assets increased \$0.6 billion or 0.3% over the quarter.

NCO are modelled under an APRA prescribed 30 day severe liquidity stress scenario. The Group manages modelled NCO by maintaining a large base of low LCR outflow customer deposits and actively managing its wholesale funding maturity profile as part of its overall liquidity management strategy. Average NCO increased \$1.9 billion or 1.3% over the quarter, mainly due to an increase in deposit cash outflows and decreased cash inflows within the 30-day window.

² Includes RBNZ securities of \$1.4 billion and alternative liquid assets (ALA) of \$nil (30 September 2025: RBNZ securities \$0.1 billion; ALA \$nil).

Liquidity Risk (continued)

LIQ2: Net Stable Funding Ratio

The NSFR requires Australian ADIs to have sufficient Available Stable Funding (ASF) to meet their Required Stable Funding (RSF) over a one year horizon. The Group calculates its NSFR position daily, ensuring a buffer is maintained over the regulatory requirement of 100% and the Board's risk appetite. The ASF and RSF are calculated by applying factors prescribed by APRA, to liabilities, assets and off-balance sheet commitments.

The Group's main sources of ASF are deposits from retail and SME customers, wholesale funding and capital. The main contributors to RSF are residential mortgages and loans to business and corporate customers.

The NSFR increased from 116% at 30 September 2025 to 117% at 31 December 2025. Over the period, the Group's ASF increased 2.5% mainly due to growth in retail and SME deposits, and an increase in wholesale funding. RSF increased 2.0% mainly due to growth in residential mortgages, and financial institution and non-financial institution lending.

	\$M	Reference
Total included in Balance Sheet	32,743	
Less amount of Tier 2 debt issued by subsidiary ineligible for inclusion in the Group's Capital	–	
Add issue costs ³	47	
Less amortisation of instruments ⁴	–	
Total per Capital Template	32,790	Row 46, 47

1 Represents the balance per Level 2 Regulatory Balance Sheet.

2 For regulatory capital purposes, APRA requires these instruments to be included as if they were unhedged.

3 Unamortised issue costs relating to capital instruments are netted off against each instrument in the Balance Sheet. For regulatory capital purposes, these capital instruments are shown at face value. The unamortised issue costs are deducted from CET1 as part of capitalised expenses in Row 26f in the Table CC1.

4 APRA requires these instruments to be amortised by 20% of the original amount during each of the last five years to maturity.

Details on the main features of capital instruments included in the Group's regulatory capital (Ordinary Share Capital, Additional Tier 1 Capital and Tier 2 Capital) as required by APS 330 can be found at Commbank.com.au/regulatorydisclosures.

CCyB1: Geographical distribution of credit exposures used in the calculation of the bank-specific countercyclical capital buffer requirement

CCyB, which is effective for Australian ADIs from 1 January 2016, represents an extension to the capital conservation buffer and may require an ADI to hold additional CET1 capital of up to 3.5%. The CCyB is calculated as the sum of the specific buffer set by APRA with respect to Australian private sector exposures and the weighted average for offshore private sector exposures where the CCyB has been enacted.

Geographical breakdown ¹	31 December 2025			
	Countercyclical capital buffer rate %	RWA used in the computation of the countercyclical capital buffer \$M	Bank-specific countercyclical capital buffer rate %	Countercyclical capital buffer ² amount \$M

3 Jurisdictions where non-zero countercyclical capital buffer rates apply.

4 Jurisdictions where countercyclical capital buffer rates of zero have been applied.

Appendices (continued)

Leverage ratio

Leverage ratio is a non-risk-based measure introduced to supplement the risk-based capital requirements. It is designed to constrain the build-up of excessive leverage in the banking system. In accordance with APS 110, the ratio is calculated by dividing Tier 1 Capital by the total leverage ratio exposure measure.

LR1: Summary comparison of accounting assets vs leverage ratio exposure measure

The table below provides a reconciliation of the Group's total assets as at 31 December 2025 in accordance with the published financial statements and the total leverage ratio exposures determined under APS 110.

The key differences between the Group's total assets in accordance with the published financial statements and the total leverage ratio exposure measure are as follows:

- measurement of derivative financial instruments in accordance with accounting standards and interpretations issued by the Australian Accounting Standards Board (AASB), compared to the application of the standardised approach for measuring counterparty credit risk exposures (SA-CCR) for the purposes of the leverage ratio exposure measure;
- off-balance sheet instruments are generally not recognised as assets in the financial statements but included in the calculation of the total leverage ratio exposure measure;
- SFTs exposures recognised in the financial statements at their reporting date values are included in the leverage ratio exposure measure based on the average month-end values during the quarter. In addition, SFTs exposures are adjusted to reflect counterparty credit risk in the calculation of the leverage ratio exposure measure; and
- total assets in accordance with the published financial statements are adjusted for regulatory capital deductions related to the Group's assets.

	31 Dec 25 \$M	30 Jun 25 \$M
1 Total consolidated assets as per published financial statements	1,408,728	1,353,799
2 Adjustment for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	89	89
3 Adjustment for securitised exposures that meet the operational requirements for the recognition of risk transference	(1,799)	(2,045)
4 Adjustments for temporary exemption of central bank reserves (if applicable)	–	–
5 Adjustment for fiduciary assets recognised on the balance sheet pursuant to the operative accounting framework but excluded from the leverage ratio exposure measure	–	–
6 Adjustments for regular-way purchases and sales of financial assets subject to trade date accounting	–	–
7 Adjustments for eligible cash pooling transactions	(2,207)	(2,305)
8 Adjustments for derivative financial instruments	2,852	8,581
9 Adjustment for securities financing transactions (i.e. repurchase agreements and similar secured lending)	(15,753)	(5,767)
10 Adjustment for off-balance sheet items (i.e. conversion to credit equivalent amounts of off-balance sheet exposures)	121,422	117,606
11 Adjustments for prudent valuation adjustments and specific and general provisions which have reduced Tier 1 capital	–	–
12 Other adjustments	(16,138)	(16,264)
13 Leverage ratio exposure measure	1,497,194	1,453,694

Appendices (continued)

LR2: Leverage ratio common disclosure template

The table below shows the leverage ratio calculation and includes additional breakdowns of the leverage ratio exposure measure. Refer to page 12 for the details on the movements in the leverage ratio.

	31 Dec 25 \$M	30 Jun 25 \$M
On-balance sheet exposures		
1 On-balance sheet exposures (excluding derivatives and securities financing transactions (SFTs), but including collateral)	1,292,890	1,248,216
2 Gross-up for derivatives collateral provided where deducted from balance sheet assets pursuant to the operative accounting framework	–	8,253
3 (Deductions of receivable assets for cash variation margin provided in derivatives transactions)	(5,141)	(5,177)
4 (Adjustment for securities received under securities financing transactions that are recognised as an asset)	–	–

Liquidity Risk

ENC: Asset encumbrance

The table below presents the carrying value of the Group's encumbered and unencumbered assets. For the purposes of this disclosure, encumbered assets are assets that the Group is restricted or prevented from liquidating, selling, transferring or assigning due to legal, regulatory, contractual or other constraints. The Group's sources of encumbrance include assets pledged under repurchase agreements, covered bonds, external securitisation and collateral. As at 31 December 2025, the Group has \$143.6 billion of encumbered assets, which is predominantly debt securities of \$75.4 billion and loans and advances of \$57.5 billion.

	31 Dec 2025		
	Encumbered assets \$M	Unencumbered assets \$M	Total \$M
Cash and liquid assets	173	82,433	82,606

Management attestation

Management attestation

Commonwealth Bank of Australia attests that:

Prudential disclosures for the Commonwealth Bank of Australia and its subsidiaries (the Group) are prepared in accordance with the "Disclosure requirements" Standard made by the Basel Committee on Banking Supervision, subject to modifications specified in APRA Prudential Standard APS 330 *Public Disclosure* (APS 330). In line with APS 330, the Group maintains a Board-approved disclosure policy that sets out the Group's approach to determining the content of its prudential disclosures, and the internal controls and procedures for disclosures, including review and verification processes. The Group's Pillar 3 Capital Adequacy and Risk Disclosures as at 31 December 2025 have been prepared in accordance with the Group's disclosure policy.

Alan Docherty
Group Chief Financial Officer
11 February 2026

Term	Definition
Additional Tier 1 Capital (AT1)	Additional Tier 1 Capital is a concept defined by APRA and consists of high quality capital that essentially provides a permanent and unrestricted commitment of funds, is freely available to absorb losses, ranks behind the claims of depositors and other senior creditors in the event of a wind-up, and provides for fully discretionary capital distributions.
Advanced Internal Ratings-based (AIRB) Approach	This approach is used to measure credit risk in accordance with the Group's Basel III accreditation. This allows the Group to use internal estimates of PD and LGD (excluding senior unsecured and subordinated corporate exposures), with supervisory estimates to be used for EAD for the purposes of calculating regulatory capital.
ASB	ASB Bank Limited – a subsidiary of the Commonwealth Bank of Australia that is regulated by the RBNZ.
Australian Accounting Standards	The Australian Accounting Standards as issued by the Australian Accounting Standards Board (AASB).
Australian Prudential Regulation Authority (APRA)	The Australian Prudential Regulation Authority is an independent statutory authority that supervises institutions across banking, insurance and superannuation, and is accountable to the Australian parliament. The regulator of banks, insurance companies and superannuation funds, credit unions, building societies and friendly societies in Australia.
Authorised Deposit-taking Institution (ADI)	ADIs are corporations that are authorised under the <i>Banking Act 1959</i> (Cth) to carry on banking business in Australia.
Banking Book	The banking book is a term for assets on a bank's Balance Sheet that are expected to be held to maturity, usually consisting of customer loans to, and deposits from retail and corporate customers. The banking book can also include those derivatives that are used to hedge exposures arising from the banking book activity, including interest rate risk.
Basel III	Refers to the Basel Committee on Banking Supervision's framework for more resilient banks and banking systems issued in December 2010 (revised in June 2011), Capital requirements for bank exposures to central counterparties (July 2012), and the subsequent Basel III reforms finalised in December 2017.
Capital Floor	The capital floor is defined as the higher of total RWA as determined under the IRB approach, and 72.5% of total RWA as calculated under the standardised approach.
CBA	Commonwealth Bank of Australia – the head entity of the Group.
Central Counterparty (CCP)	A clearing house that interposes itself between counterparties to contracts traded in one or more financial markets, thereby ensuring the future performance of open contracts.
Collective Provision	All loans and receivables that do not have an individually assessed provision are assessed collectively for impairment. The Collective Provision is maintained to reduce the carrying value of the portfolio of loans to their estimated recoverable amounts. These provisions are reported in the Group's Financial Statements in accordance with Australian Accounting Standards (AASB 9 <i>Financial Instruments</i>).
Commercial Property	Basel asset class – a property exposure that is not a residential property or a land acquisition, development and construction exposure.
Common Equity Tier 1 (CET1) Capital	The highest quality of capital available to the Group reflecting the permanent and unrestricted commitment of funds that are freely available to absorb losses. It comprises ordinary share capital, retained earnings and reserves, less prescribed deductions.
Corporate	This includes commercial credit risk where annual revenues are greater than or equal to \$75 million but less than \$750 million.
Corporate - Large	Basel asset class – applies to commercial credit risk where annual revenues are more than \$750 million.
Credit Valuation Adjustment (CVA) Risk	The risk of mark-to-market losses related to deterioration in the credit quality of a derivative counterparty.
Domestic Public Sector Entity	Basel asset class – exposures that do not meet the definition of Sovereign exposures, but have a level of control or ownership by any level of the Australian Government or the RBA, including those which do not have specific revenue-raising powers.
Exposure at Default (EAD)	The extent to which the Group may be exposed if a borrower defaults.

Glossary (continued)

Term	Definition
Extended Licensed Entity (ELE)	An Extended Licensed Entity comprises an ADI and any of its subsidiaries specified in an approval granted by APRA under Prudential Standard APS 222 <i>Associations with Related Entities</i> .
External Credit Assessment Institution (ECAI)	For example: Moody's Investor Services, S&P Global Ratings or Fitch Ratings.
Financial Institution	Basel asset class – primarily includes exposures which relate to: banking, the management of financial assets, lending, factoring, leasing, provision of credit enhancements, securitisation, investments, financial custody, central counterparty services, and proprietary trading.
Foundation Internal Ratings-based (FIRB) Approach	This approach is used to measure credit risk in accordance with the Group's Basel III accreditation that allows the Group to use internal estimates of PD and rely on supervisory estimates for LGD and EAD for the purposes of calculating regulatory capital.
General Provisions	Collective Provisions classified as Stage 1 and Stage 2 in accordance with Australian Accounting Standards (AASB 9 <i>Financial Instruments</i>). All Stage 2 provisions are held on a purely forward-looking basis for future losses presently unidentified; hence all Stage 2 provisions (together with Stage 1) are classified as General Provisions.
Group	Commonwealth Bank of Australia and its subsidiaries.
High-Quality Liquid Assets (HQLA)	Assets are considered to be high-quality liquid assets if they can be easily and immediately converted into cash at little or no loss of value.
Individual provisions	Provisions made against individual facilities where there is objective evidence of impairment and full recovery of principal and interest is considered doubtful. These provisions are as reported in the Group's Financial Statements in accordance with the Australian Accounting Standards (AASB 9 <i>Financial Instruments</i>). Also known as individually assessed provisions or IAP.
Interest Rate Risk in the Banking Book (IRRBB)	Interest Rate Risk in the Banking Book is the risk that the Bank's profit derived from Net Interest Income (interest earned less interest paid), in current and future periods, is adversely impacted by changes in interest rates. This is measured from two perspectives: firstly by quantifying the change in the net present value of the Balance Sheet's future earnings potential, and secondly as the anticipated change to Net Interest Income earned over 12 months.
Level 1	The Parent Bank (Commonwealth Bank of Australia), offshore branches (the Bank) and APRA approved Extended Licensed Entities.
Level 2	The level at which the Group reports its capital adequacy to APRA, being the Consolidated Banking Group comprising the ADI and all of its subsidiary entities other than the insurance business and certain entities through which securitisation of Group assets is conducted. This is the basis on which this report has been produced.
Level 3	The conglomerate group including the Group's insurance entity and qualifying securitisation entities.
Leverage Ratio	Tier 1 Capital divided by total exposures, expressed as a percentage.
Liquidity Coverage Ratio (LCR)	The LCR is a quantitative liquidity measure that is part of the Basel III reforms. It was implemented by APRA in Australia on 1 January 2015. It requires Australian ADIs to hold sufficient liquid assets to meet 30-day net cash outflows projected under an APRA prescribed stress scenario.
Loss Given Default (LGD)	An estimate of the expected severity of loss for a credit exposure following a default event. LGD represents the fraction of EAD that is not expected to be recovered following a default.
Net Cash Outflows (NCO)	Net cash outflows in the LCR are calculated by applying prescribed run-off factors on liabilities and various off Balance Sheet exposures that can generate a cash outflow in the next 30 days.
Net Stable Funding Ratio (NSFR)	The NSFR more closely aligns the behaviour term of assets and liabilities. It is the ratio of the amount of available stable funding (ASF) to the amount of required stable funding (RSF). ASF is the portion of an ADI's capital and liabilities expected to be a reliable source of funds over a one-year time horizon. RSF is a function of the liquidity characteristics and residual maturities of an ADI's assets and off Balance Sheet activities.

Glossary (continued)

Term	Definition
Non-performing	<p>Credit exposures are classified as non-performing when they are in default. Default is considered to have occurred with regards to a particular borrower or counterparty when either:</p> <ul style="list-style-type: none"> • they are 90 calendar days or more past due on a credit obligation to the Group; and/or • the Group considers they are unlikely to pay their credit obligations to the Group in full, without recourse by the Group to actions such as realising available security. <p>A credit exposure that has been classified as non-performing may be reclassified to performing when all of the following criteria are met:</p> <ul style="list-style-type: none"> • the borrower or counterparty does not have any credit exposure 90 days or more past-due; • the borrower's or counterparty's situation has improved so that full repayment of the credit exposure is likely; • repayments have been made when due over a continuous repayment period of at least 90 calendar days, or at least six months for restructured exposures; and • no individually assessed provision is held.
Operational Risk under the Standardised Measurement Approach	The methodology used to measure operational risk, utilising an APRA prescribed formulaic approach which is largely dependent on profit or loss from ordinary banking activities.
Other Assets	Basel asset class – primarily includes Cash Items, Investments in Related Entities, Fixed Assets, Lease Assets and Margin Lending.
Other Retail	Basel asset class – primarily includes retail credit exposures not otherwise classed as a residential mortgage, SME retail or a qualifying revolving retail asset.
Past Due	Facilities are past due when a contracted amount, including principal or interest, has not been met when due, or when it is otherwise outside contracted arrangements.
Probability of Default (PD)	The PD reflects a borrower's ability to generate sufficient cash flows in the future to meet the terms of all of its credit obligations to the Group.
Prudential Capital Requirement (PCR)	The regulatory minimum CET1, Tier 1 and Total Capital ratios that the Group is required to maintain at all times.
Qualifying Revolving Retail (QRR)	Basel asset class – represents revolving exposures less than \$0.1 million to individuals, unsecured and unconditionally cancellable by the Group. Only Australian retail credit cards qualify for this asset class.
RBA	Reserve Bank of Australia.
RBNZ	Reserve Bank of New Zealand.
RBNZ regulated entities	All references to RBNZ regulated entities refer to RBNZ regulated subsidiaries and include ASB exposures for which RWA are calculated using the RBNZ's prudential rules subject to certain APRA-prescribed adjustments.
Residential Mortgage	Basel asset class – retail exposures secured by residential mortgage property.
Risk Weighted Assets (RWA)	The value of the Group's on and off Balance Sheet assets are adjusted by risk weights calculated according to various APRA prudential standards.
Scaling Factor	In order to broadly maintain the aggregate level of capital in the global financial system post implementation of Basel II, the Basel Committee on Banking Supervision applies a scaling factor to the RWA amounts for credit risk under the IRB Retail, AIRB and FIRB approaches of 1.10. This is also applied to advanced exposures within RBNZ regulated entities.
Securities Financing Transactions (SFT)	APRA defines securities financing transactions as transactions such as repurchase agreements, reverse repurchase agreements, security lending and borrowing, and margin lending transactions, where the value of the transactions depends on the market valuation of securities and the transactions are typically subject to margin agreements.
Securitisation	Basel asset class – Group originated securitised exposures and the provision of facilities to customers in relation to securitisation activities.
SME corporate	Basel asset class – Small and Medium Enterprise (SME) commercial credit risk where annual revenues are less than \$75 million.
SME retail	Basel asset class – Small and Medium Enterprise (SME) commercial credit risk where annual revenues are less than \$75 million and exposures are less than \$1.5 million.

Glossary (continued)

Term	Definition
Sovereign	Basel asset class – primarily claims on Australian and foreign governments, central banks (including the RBA), international banking agencies and regional development banks.
Specialised Lending	Basel asset classes subject to the supervisory slotting approach which include: object finance, project finance and commodity finance.
Specific Provisions	All provisions, both collectively and individually assessed, classified as Stage 3 in accordance with Australian Accounting Standards (AASB 9 <i>Financial Instruments</i>).
Stage 1	On origination, an impairment provision equivalent to 12 months expected credit losses (ECL) is recognised, reflecting the credit losses expected to arise from defaults occurring over the next 12 months.
Stage 2	Financial assets that have experienced a significant increase in credit risk (SICR) since origination are transferred to Stage 2 and an impairment provision equivalent to lifetime ECL is recognised. Lifetime ECL is the credit losses expected to arise from defaults occurring over the remaining life of financial assets. If credit quality improves in a subsequent period such that the increase in credit risk since origination is no longer considered significant the exposure is reclassified to Stage 1 and the impairment provision reverts to 12 months ECL.
Stage 3	Non-performing (defaulted) financial assets are transferred to Stage 3 and an impairment provision equivalent to lifetime ECL is recognised.
Standardised Approach	An alternate approach to the assessment of credit, operational and traded market risk whereby an ADI uses external ratings agencies to assist in assessing credit risk and/or the application of specific values provided by regulators to determine RWA.
Stressed Value-at-Risk (SVaR)	Stressed Value-at-Risk uses the same methodology as VaR except that the historical data used is taken from a one-year observation period of significant market volatility as seen during the Global Financial Crisis.
Tier 1 Capital	Comprises CET1 and Additional Tier 1 Capital.
Tier 2 Capital	Capital items that fall short of the necessary conditions to qualify as Tier 1 Capital.
Total Capital	Comprises CET1, Additional Tier 1 Capital and Tier 2 Capital.
Total Exposures (as used in the leverage ratio)	The sum of on Balance Sheet items, derivatives, securities financing transactions (SFTs), and off Balance Sheet items, net of any Tier 1 regulatory deductions that are already included in these items, as outlined in APS 110 <i>Capital Adequacy</i> (APS 110) Attachment D.
Trading Book	Exposures, including derivative products and other off Balance Sheet instruments that are held either with a trading intent or to hedge other elements of the trading book.
Value-at-Risk (VaR)	Value-at-Risk is a measure of potential loss using historically observed market volatility and correlation between different markets.

Important information

The material in this report is current as at the date of this report, 11 February 2026.

This report may contain certain forward-looking statements with respect to the financial condition, capital adequacy, operations and business of the Group. Forward-looking statements can generally be identified by the use of words such as "may", "will", "would", "could", "expect", "aim", "estimate" or other similar words, and include statements regarding the Group's intent, belief or current expectations with respect to the Group's business and operations, market conditions, results of operations and financial condition, capital adequacy and risk management. Such forward-looking statements speak only as at the date of this report and undue reliance should not be placed upon such statements. Past performance is not a reliable indicator of future performance. Although the Group currently believes the forward-looking statements have a reasonable basis, they are not certain and involve known and unknown risks and assumptions, many of which are beyond the control of the Group, which may cause actual results, conditions or circumstances to differ materially from those expressed or implied in such statements.

Actual results may vary significantly from those anticipated or suggested by forward-looking statements, due to a range of factors, including but not limited to those outlined in the sections titled 'Our operating context' and 'Managing our risks' in our 2025 Annual Report, available at commbank.com.au/annualreport. Readers are cautioned not to place undue reliance on forward-looking statements, particularly in light of: current economic conditions, the increasingly complex geopolitical setting, competitive intensity and the evolving technological landscape.

To the maximum extent permitted by law, responsibility for the accuracy or completeness of any forward-looking statements, whether as a result of new information, future events or results or otherwise, is disclaimed. The Group is under no obligation to update any of the forward-looking statements contained within this report, subject to applicable disclosure requirements.

This report includes disclosure of credit ratings. A credit rating is not a recommendation to buy, sell or hold any securities and may be changed at any time by the applicable credit ratings agency. Each credit rating should be evaluated independently of any other credit rating.
