About Channel Infrastructure

Channel Infrastructure is New Zealand's largest fuel import terminal business, storing and distributing 40% of New Zealand's transport fuel, including 80% of New Zealand's jet fuel. We receive, store, test and distribute petrol, diesel, and jet fuel that our customers import and supply to Auckland and Northland.

Fuel is imported via our deep-water harbour and jetty infrastructure at Marsden Point and stored in more than 410 million litres of contracted storage tanks on site. The fuel is then distributed via our 170-kilometre pipeline to Auckland, or by our customers (bp, Mobil, and Z Energy) via truck into Northland. We underpin the resilience of New Zealand's fuel supply chain with our tank capacity, which enables increased storage of fuel in New Zealand, and through efficient, low emission distribution of the fuel into the Auckland market. Given our proximity to Auckland, and critical role in the jet fuel supply chain, Channel is well positioned to support the renewable fuel transition. Channel also has more than 350 million litres of tank capacity available for repurposing to finished product storage to support fuel security projects and a further 45 hectares of consented, freehold land available for greenfields fuel storage projects.

Our plan for growth includes supporting fuel resilience for New Zealand through additional fuel storage on our site, unlocking the strategic value of the Marsden Point Energy Precinct Concept which reflects the significant role Channel could play in supporting New Zealand's energy transition – through potential opportunities including supporting the manufacture of lower-carbon future fuels, as well as a range of potential energy security opportunities, and exploring expansion beyond Marsden Point.

Channel Infrastructure also owns a 25% interest in the Somerton jet fuel pipeline to Melbourne Airport and its wholly-owned subsidiary, Independent Petroleum Laboratory Limited, provides fuel quality testing services throughout New Zealand.
